

CRYSTAL LIQUID GLASS

Sodium silicate solution

Increases the water resistance of concrete products.

Used as a thickener for water dispersible colours, an additive to chalk solutions for the whitening of fruit trees, as well as gluing paper and cardboard.

INSTRUCTION

Clean the surface of dust before treating with Crystal. The surface must also be dry. In order to increase moisture resistance and seal plastered surfaces, treat the surface with Crystal solution twice. Keep out of the reach of children. If the solution gets into the eyes, wash eyes immediately with a lot of water and seek medical assistance.
